

## TH857

**A range of timers and relays to compliment any access control system - from simple switching and lock release delay, to the control of timed free access through an electronically locked door, these accessories are essential for any engineers toolbox.**

The TH Series of timers provide various weekly and daily programmes to control the automatic release of locks for "free access" periods. Easy to programme, with LCD digital displays to give visual feedback, these timers allow up to 8 on/off schedules to be applied daily or weekly - in fact there are pre-set groups of days to assist in the set up of the programming.

The timers operate automatically but also include a manual override. They include an NCID battery for back up, and are available with different voltages.

### Overview

- Timed lock control
- Easy to programme/install
- Weekly/daily programmes
- LCD digital display
- Heavy duty switching
- CMOS quartz technology
- 2 year warranty

## TH857 - Technical Specifications

### Product Specifications

On/Off: 8 per day  
Battery backup (NICD): 200 hours

### Electrical Specifications

Voltage: 230Vac  
Switching: 8A

### Dimensions

Dimensions: 85 x 65 x 36mm
